Animal Welfare
- Awareness to treat animals with the same concern as our own kind.
- Simulation experiments to reduce animal experimentation in all fields.

Food safety and security
- Ensuring availability of sufficient, safe and nutritious food for all.
- Development of value added and functional protein rich food.

One Health
- Collaborative effort by Medical, Veterinary and Environmental experts to achieve best health practices for humans, animals and environment.
- Increased awareness on zoonotic diseases transmitted between animals to humans and vice-versa.

Climate change
- Global warming – man-animal conflict.
- Increased outbreaks of diseases in newer geographical and agroclimatic zones.
- Decreased animal growth and production – economic loss.

Conservation of Indigenous Animals & Birds
- Designing policies to maintain indigenous animal genetic pool.
- Augmenting yields and disease resistance by suitable breeding methods.

Antibiotic resistance
- Indiscriminate use of antibiotics, use of antibiotics in animal feed as growth promoters etc., lead to antibiotic resistance.
- Methicillin resistant Staphylococcus aureus - the ‘superbug’.
- Extended Spectrum β-Lactamase producing E. coli – An emerging pathogen.

Innovations
- New information, imagination and initiative to derive greater value from animal wealth.
- Strategies to reduce animal sufferings and augmenting their general well being.
